

OLIN Products: HVBTR-1200

HVBTR-1200 – Recording to external USB HDD.

This document is a supplement to the HVBTR-1200 User Guide.

Connecting the external USB HDD

(For more information on the types of External USB Hard Disc Drives, refer to **HVBTR1200-003B.pdf** - **HVBTR-1200 / HVBTR-1400 - External drive and Flash Drive support notes** under the Product FAQs on www.olinlivenow.com.au)

HVBTR-1200

Push Open the front cover to show the USB port. Connect USB HDD. Light on the HDD should indicate power.

The HVBTR-1200 should recognise the USB HDD on screen – USB device connected.

For technical support and warranty issues, please contact your friendly support team at Westwell Australia. Call 1800 656 630 (Australia Wide Toll Free) or +612 9211 0478 (Outside Australia) or email support@westwell.com.au

Three ways to record from the HVBTR-1200:

- 1. RECORD key on demand instant recording.
- 2. EPG key setting from the Electronic Programming Guide (EPG).
- **3. Timer Setting** setting via the menu system.
- 1. RECORD key on demand instant recording. (Manual Page 17 Section 6.2)

Press the **RECORD** key and the recording information displays on the screen:

Press **RECORD** key again. You can change the recording Duration from the **default 2 hours** to any amount of time. Press the **EXIT** key to set the adjusted time.

Example: change recording Duration from 2 hours to 3 hours using the numeric buttons on the remote:

Note: If your recording exceeds 3 hours, set Auto Standby to Off. See 7. Auto Standby at the end of this document.

EXIT key on the RCU clears the screen of recording information. The **REC** symbol stays on the screen of the channel you are recording.

You leave the recording to automatically complete when it reaches the end of the recording Duration.

You can also finish the recording before the end of the recording Duration:

To finish recording, press the **STOP** key on the RCU. A display will show what you have recorded.

Press **STOP** key on the RCU again. The HVBTR-1200 will ask for confirmation that you wish to finish the recording. Use \ge (left direction) key to select **Yes** and **OK** key to stop recording.

Other tips for instant recording:

 Watching same Logical Channel Number (LCN). HVBTR-1200 is not a dual tuner. But you can move between the different channels in the Logical Channel Number (LCN) that you are recording. For example you can record ABC1 and watch ABC2 (or another ABC channel). But you cannot record ABC 1 and watch channel 9 or 10 etc.

2. EPG key – setting from the Electronic Programming Guide (EPG). (Manual Page 21 Section 7.14.4)

Use the direction keys to highlight the program you wish to record:

Press the green TXT key to open the record screen

Set Timer Service to Record

CHO MINE	0.52	19/6/2010	9	EPG	16:32.1	9/8/2010
Antiqu 17:00	Current Time / Date Timer Mode	: 04:33 PM 19/08/2 Once	2010	0009 NINE Antiqu	Current Time / Date: 04:33 PM 19/08 Timer Mode Once	
10/0	Wakeup Chappel	NINE DIGITAL		17.00	Timer Service 4	Record >
19/8	Wakeup Date	19/08/2010		19/8	Wakeup Channel	NINE DIGITAL
001 ONE H	Wakeup Time	17:00		and the share a state of the	Wakeup Date	19/08/2010
002 ABC1	Duration	00:30		0001 ONE H	Wakeup Time	17:00
003 SBS 0				0002 ABC1	Duration	00:30
0007 7 Digita	Save	(Cancel)		0003 SBS 0		
009 NINE C	9		6 +	0007 7 Digita	Save	Cancel
		📕 Time 🔛 Tir	mer	12 0009 NINE D	2	

TIP: **EPG** is not always up to date and does not always take into account program overruns and so on. At this point you could set the **Wakeup Time** to an earlier time and the **Duration** to a longer period to allow for difference between the EPG and actual running times. See **3. Record Timer** section following for an example.

Note: If your recording exceeds 3 hours, set Auto Standby to Off. See 7. Auto Standby at the end of this document.

Use the direction keys to highlight Save and press the OK key

Use the **Exit** key to back out of the EPG. You have now set a program to record.

To review your setting, press the **MENU** key and use the direction keys to go to the System Setup menu

Choose Timer Setting and press OK to show the recordings you have set

EXIT Key will take you out of the menus.

3. Record Timer - setting from the HVBTR-1200 menu system. (Manual Page 12)

Useful if you know what time your program is on and you want to set options outside of the EPG information.

Press the **MENU** key and use the directional keys to go to the System Setup menu.

Use the direction keys to Timer Setting and press OK to show the timer slots available:

Choose the next available recording slot and press **OK** to display the recording screen. Using the $rac{t}{}^+$ (right direction) key to set **Timer Mode** to **Once**

PR- key down to Timer Service and set to Record

PR- key down to Wakeup Channel and set to the station you wish to record

PR- key down to Wakeup Date and set to the date of the program

PR- key down to **Wakeup Time** and set to the time the program starts (24 hour clock). **TIP:** In the example below we set the time to 5 minutes before (11:55) the program starts (12:00) to make sure we catch the beginning of the show.

PR- key down to **Duration** and set the recording length. **TIP:** In the example below we have allowed for the 5 minutes for the early start (11:55). We have also added 5 minutes longer to allow for any program overruns (11:55 + 40 minutes = 12:35 finish).

Note: If your recording exceeds 3 hours, set Auto Standby to Off. See 7. Auto Standby at the end of this document.

Use the direction keys to the **Save** key and press **OK**. The program details will show in the recording slot. Press **EXIT** 3 times to back out of the menu system.

To review your setting, press the **MENU** key and use the directional keys to go to the System Setup menu

Choose Timer Setting and press OK to show the recordings you have set

EXIT key will take you out of the menus.

4. EPG and Record Timer recording process

Usually you will have set the HVBTR-1200 to standby and probably turned the TV off after you have set an EPG or Record Timer recording. When the Wakeup Time is reached, the HVBTR-1200 will automatically come out of Standby mode and begin recording. Once the recording has finished, the HVBTR-1200 will go back into Standby mode. If your TV is off, you do not see any of this activity.

If you did have your TV on, this is the process you would see:

The HVBTR-1200 will wake up and recognise the USB device attached – USB device connected.

Event Notified indicates it is performing a Timed Recording

Recording screen will begin with information on the status of the recording.

Note: EXIT key will clear the recording information from the screen.

Event finished notifies that the recording has stopped.

The HVBTR-1200 will then start a 15 second countdown before it goes into **standby mode**. If you chose yes it will not go into standby mode and you can continue watching.

5. Playing your recordings (Manual Page 18)

FIND key will display the Record Manager

Press **OK** key to begin playing.

Note: EXIT key will clear the recording information from the screen.

The control keys on the RCU perform the usual functions (PLAY / STOP / FAST / SLOW).

Fast will action both Fast Forward and Fast Reverse (X2 / X4 / X8 / X16 / X24)

Jump function can make it much faster to move backward and forward through a recording.

Example – press the $\stackrel{+}{\rightharpoonup}$ (right direction) key to advance the jump marker (example is to half way).

MPs plead for patience ahead	of talks with Coalition and ALP	11:56 AETT	MPs plead	for patience ahead of	talks with Coalition	n and ALP	124 1 1 11:56 AELT

Press **OK** key and the program will begin playing from where the Jump marker is positioned.

Last Play function – when you stop watching a recording part way through, the HVBTR-1200 will remember the position where you stopped viewing. Next time you open that recording, it will begin playing from that position.

Other recording tips:

6. Renaming your recordings – (Manual Page 17)

FIND (red) key will display the Record Manager.

Press the FIND (red) key again to display the onscreen keypad.

Use the direction keys, the onscreen keypad and the OK key on the remote to rename the program. Name can be up to 17 characters long.

Record Manager	President and Rectified Adda					
ABC News24	Rename ABC arvo news					
(DVR)						
11:55~12:35 (00:40:00) 2483M	а	ь	c	d	e	f

EXIT key will take you out of the menus.

 Auto Standby – (Manual Page 12) - a power saving function that puts the HVBTR-1200 into Standby mode after 3 hours if there no activity from the controller. If your recording is going to be over 3 hours, set the Auto Standby in the TV System menu to off.

Press **MENU** key and use the direction keys to the System Setup menu. The $rac{-+}{-+}$ (right direction) key to the TV System.

Press **OK** key to the TV System menu and use the direction keys to highlight and set the Auto Standby. The right direction key will toggle between On and Off.

TV System					TV S	ystem
